\*\*CBD Conversion 0.00%

\***Total THC** is calculated using the equation  $THC + (THC-A \cdot 0.877)$ . This accounts for the weight lost by THC-A when it is decarboxylated to become active THC. An equivalent formula is used to determine Total CBD.

\*\***THC/CBD Conversion** indicates the percentage of total cannabinoid that was already converted to active cannabinoid at the time of testing. 100% indicates that all cannabinoid present was in the active, decarboxylated form at the time of testing.

**N/D** = Not Detected. The level of analyte was below the detection threshold for this test.

**LLOQ** = Lower Limit of Quantitation. <LLOQ signifies that the analyte was detected at a concentration below the calibrated range of the method and could not be accurately measured.
